

DIRECTORY FRAMEWORK

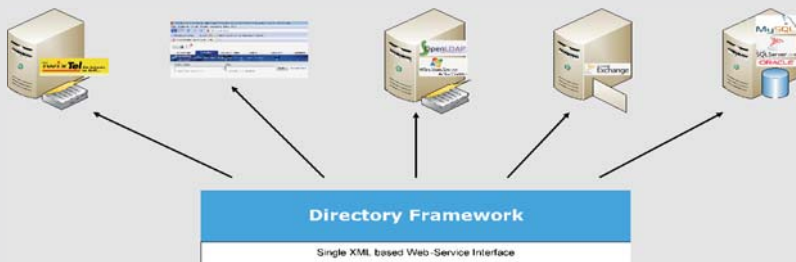

Most companies use several databases to store important addresses:

- Active Directory, Domino or Novell eDirectory for corporate data
- SQL based databases for customer data
- Microsoft Exchange personal or public folders
- CD or Internet based telephone/address directories (e.g. Twixtel)
- Excel Sheets, Microsoft Access databases, textfiles etc.

Now there is a way to provide a unified access to many databases from one single interface. Based on a „per employee“ configuration, databases are screened and may be used for instance to initiate a phone call.

PROVIDE A SINGLE INTERFACE TO ALL YOUR ADDRESS DATABASES

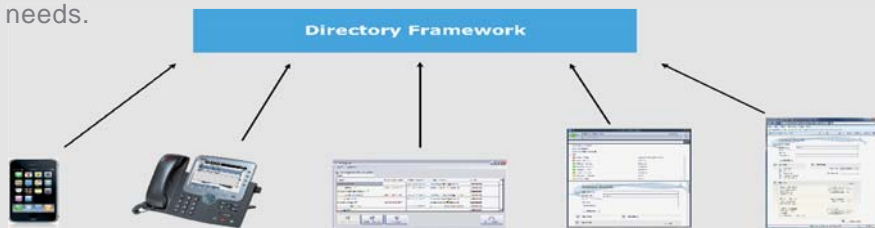

The Directory Framework provides you with a single XML based Web Service interface matching to all your databases and directories:

The XML interface is accessible from any application and any device.

SEARCH FOR ADDRESS INFORMATION FROM ANYWHERE

We provide many useful client applications for various devices for free (under GPL license). You may match them according to your needs.

WE PROVIDE SECURITY PATCHES, UPGRADES AND SUPPORT

The Directory Framework is already used by many medium and large companies from various industries to meet their requirements. It is therefore updated regularly to live up to their expectations. On top, we offer licensing and support packages directly to end customers or to system integrators who wish to sell our products to their own customers. For customers with specific needs, we integrate VoIP/UC products into their environment, such as your ERP, CRM or desktop solutions. To adjust the Directory Framework or any of the client applications to your own needs, please do not hesitate to contact us.

Great opportunities on handling Cisco UC environment without the need of deep technical knowledge.

HIGH RETURN ON LOW INVESTMENT!

UC-WARE PRODUCTS

We offer a wide range of products to help you to integrate VoIP/Unified Communications Solutions more efficiently into your business processes:

Integration Frameworks:

- CTI Framework
- Directory Framework
- Building System Integration Framework
- Cisco VoIP / Microsoft UC Integration Framework

OSS/BSS:

Mabata (mandator based telephony administration) integrates VoIP/UC with corporate HR / directory solutions and delegates the administration of users, phones and lines to departments and subsidiaries.
